

Every Lesion and Biopsy Signed Same Day

CLINICAL INTELLIGENCE FOR DERMATOLOGY PRACTICES:
BEFORE, DURING, AND AFTER EVERY VISIT

THE CHALLENGE

Notes Pile Up Faster Than Providers Can Finish Them

Dermatology moves fast: short, high-frequency visits, precise lesion documentation, biopsy tracking that cannot slip, and pathology follow-ups that have to close. At that pace, **notes pile up faster than any provider can finish them between patients**, and the backlog waits at the end of every clinic day.

Where Most Tools Fall Short

Ambient AI scribes and traditional scribe programs each address part of the dermatology note. Lesion detail, biopsy tracking, and pathology follow-up **remain with the dermatologist**.

THE GAP	MOST TOOLS TODAY	SOLUTIONS	THE SCRIBE-X STANDARD
Scope of Work	Draft the visit narrative. Biopsy orders, codes, and the after-visit summary remain with the dermatologist.	ASSIST LIVE	The note, orders, codes, and after-visit summary are completed and **ready for the dermatologist to sign**.
Accuracy	Leave lesion location, size, and morphology for the dermatologist to verify before signature.	ASSIST LIVE	On Assist and Live, **a trained team member works the note** before it reaches the dermatologist: the Remote Healthcare Assistant on Assist, the Remote Medical Scribe on Live.
Before the Visit	Begin at the encounter. Pathology results and open orders fall to staff or the dermatologist.	LIVE ADD-ON: ASSIST AND SOLO	Pre-Visit Intelligence prepares the chart and surfaces pathology results and open orders **before the dermatologist enters the room**.
Provider Fit	Apply one template across medical, procedural, and cosmetic dermatology.	SOLO ASSIST LIVE	Support is **set per provider** and matched to visit type, templates, and documentation preferences.
Coverage	Depend on local hiring. Vacancies return the documentation to the dermatologist.	ASSIST LIVE	Scribe-X recruits, trains, and manages a **remote team** for your dermatologists, with coverage planned for every shift.

THE SOLUTION

One Platform, Set Per Dermatologist

The Scribe-X Clinical Intelligence Platform: **trained people behind the automation, across the whole patient journey.** Most AI scribes stop at the note. Scribe-X completes the work around every dermatology visit, and you choose the level of support for each dermatologist.

Solo

ADAPTIVE AUTOMATION

Automation drafts the dermatology note from the visit. Your team reviews and finalizes it, including lesion and biopsy detail.

Assist

AUTOMATION + HUMAN SUPPORT

Assist completes the work. Automation drafts the dermatology note. A trained Remote Healthcare Assistant finishes it: the note in your chart, the biopsy orders, the codes, the after-visit summary. It arrives ready to sign. A second set of eyes on every note.

MOST POPULAR

Live

HIGH-TOUCH, HUMAN

A trained Remote Medical Scribe documents each dermatology visit in real time. The work is done before the patient leaves. For high-volume dermatology clinics where every lesion must be recorded.

BEFORE THE VISIT

Pre-Visit Intelligence

Pathology results and open orders are surfaced before the dermatologist walks in. Built into Live, an optional add-on for Assist and Solo.

DURING THE VISIT

Encounter Intelligence

The visit is captured in your EHR while the dermatologist stays with the patient. Included in every solution.

AFTER THE VISIT

Ready to Sign

The note, the codes, the orders, and the after-visit summary arrive ready for the dermatologist to sign, finished by a trained team member on Assist and Live.

Support is set per dermatologist, in ascending levels of human involvement: Solo where your team keeps the finish in-house, Assist where a completed note after the visit fits the clinic, and Live for most dermatologists, documenting every lesion in real time. One account, one vendor, and any dermatologist moves when their needs change.
