

Full Orthopedic Clinics Documented Same Day

CLINICAL INTELLIGENCE FOR ORTHOPEDIC PRACTICES:
BEFORE, DURING, AND AFTER EVERY VISIT

THE CHALLENGE

Get Surgeons Back to the OR

Orthopedics is procedure-heavy by design: operative days, clinic days, imaging review, and procedure-specific templates that have to be right for every patient. Surgeons chose the specialty to operate and treat, and **clinic documentation keeps pulling them away from the OR**. Notes run late, billing lags behind incomplete records, and surgical capacity pays for it.

Where Most Tools Fall Short

Ambient AI scribes and traditional scribe programs each address part of the orthopedic note. Procedure-specific templates, imaging review, and follow-up documentation **remain with the surgeon**.

THE GAP	MOST TOOLS TODAY	SOLUTIONS	THE SCRIBE-X STANDARD
Scope of Work	Draft the visit narrative. Orders, codes, and the after-visit summary remain with the surgeon.	ASSIST LIVE	The note, orders, codes, and after-visit summary are completed and **ready for the surgeon to sign**.
Accuracy	Leave procedure-specific detail and laterality for the surgeon to check before signature.	ASSIST LIVE	On Assist and Live, **a trained team member works the note** before it reaches the surgeon: the Remote Healthcare Assistant on Assist, the Remote Medical Scribe on Live.
Before the Visit	Begin at the encounter. Imaging, prior visit notes, and open orders fall to staff or the surgeon.	LIVE ADD-ON: ASSIST AND SOLO	Pre-Visit Intelligence prepares the chart and surfaces history, labs, and open orders **before the surgeon enters the room**.
Provider Fit	Apply one template across sports medicine, joints, spine, and hand.	SOLO ASSIST LIVE	Support is **set per provider** and matched to subspecialty, procedure, templates, and documentation preferences.
Coverage	Depend on local hiring. Turnover on clinic days returns the documentation to the surgeon.	ASSIST LIVE	Scribe-X recruits, trains, and manages a **remote team** for your surgeons, with coverage planned for every shift.

THE SOLUTION

One Platform, Set Per Surgeon

The Scribe-X Clinical Intelligence Platform: **trained people behind the automation, across the whole patient journey.** Most AI scribes stop at the note. Scribe-X completes the work around every orthopedic visit, and you choose the level of support for each surgeon.

Solo

ADAPTIVE AUTOMATION

Automation drafts the orthopedic note from the visit. Your team reviews and finalizes it against the procedure templates your surgeons use.

MOST POPULAR

Assist

AUTOMATION + HUMAN SUPPORT

Assist completes the work. Automation drafts the orthopedic note. A trained Remote Healthcare Assistant finishes it: the note in your chart, the orders, the codes, the after-visit summary. It arrives ready to sign. A second set of eyes on every note.

Live

HIGH-TOUCH, HUMAN

A trained Remote Medical Scribe documents each orthopedic clinic visit in real time. The work is done before the patient leaves. For high-volume clinic days where documentation cannot slip.

BEFORE THE VISIT

Pre-Visit Intelligence

Imaging history, prior visit notes, and open orders are surfaced before the surgeon walks in. Built into Live, an optional add-on for Assist and Solo.

DURING THE VISIT

Encounter Intelligence

The clinic visit is captured in your EHR while the surgeon stays with the patient. Included in every solution.

AFTER THE VISIT

Ready to Sign

The note, the codes, the orders, and the after-visit summary arrive ready for the surgeon to sign, finished by a trained team member on Assist and Live.

Support is set per surgeon, in ascending levels of human involvement: Solo where your team keeps the finish in-house, Assist for most surgeons, Live for the clinic days that need it. One account, one vendor, and any surgeon moves when their needs change.
